## Appendix 1 - Compendium of Critical Appraisal Tools

### Purpose

To provide some tools for conducting critical appraisal (step 3 below).

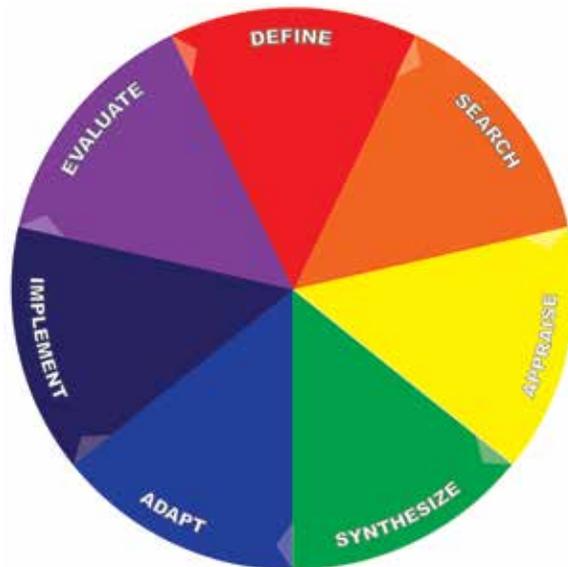

### Audience

Public health decision makers in practice or policy.

### Introduction to Evidence-Informed Public Health

The evidence-informed decision-making process includes the following steps:

#### Stages in Evidence-Informed Public Health

<b>Stage in EIPH</b>	<b>Description</b>
DEFINE	Clearly define the question or problem.
SEARCH	Efficiently search for research evidence
APPRAISE	Critically and efficiently appraise the research sources
SYNTHESIZE	Interpret/ form recommendations for practice based on the literature found
ADAPT	Adapt the information to a local context
IMPLEMENT	Decide whether (and plan how) to implement the adapted evidence into practice or policy
EVALUATE	Evaluate the effectiveness of implementation efforts

## How to use this tool

Consider the type of question you are asking (first column); then consider the type of evidence you have found. That will lead you to what tool to use.

This is not an exhaustive list of critical appraisal tools; merely a listing of tools that are commonly used.

The status **Recommended** indicates that the tool 1) was judged as relevant for most studies in public health, and 2) includes an explanation of criteria within the tool, so the use of the criteria are self-explanatory.
