

NATIONAL COLLABORATING CENTRE FOR METHODS AND TOOLS (NCCMT)

Who We Are

We are leaders in and champions for evidence-informed decision making (EIDM) in public health across Canada. The NCCMT is part of a network of six National Collaborating Centres (NCCs).

What We Do

The NCCMT facilitates and scales EIDM in public health organizations in Canada. We provide high-quality resources, real-world training and practical mentorship that respond to the evolving needs of public health.

Who We Serve

The NCCMT supports and engages those working in public health across Canada at all levels, from front line service workers to policy makers. Our products and services are relevant to public health practices worldwide and to health care in general.

Value We Add

The NCCMT advances stronger public health, driven by the best-available evidence, to improve the health and well-being of every person living in Canada.

Curate Evidence

We navigate and translate evidence to share what works best in public health, making it easier to find and use resources for effective knowledge translation. Our Registry of Methods and Tools for EIDM provides collated resources to support EIDM. The Health Evidence™ database offers indexed, quality-rated systematic reviews that evaluate the effectiveness of public health interventions. Our Rapid Evidence Service provides rigorous rapid reviews to answer priority public health questions.

Build Competence

We work to develop organizational and individual knowledge, capacity and confidence in applying the process of EIDM. Our problem-based online learning modules, comprehensive Knowledge Broker Mentoring Program, engaging virtual and in-person workshops, and interactive webinars are just a few of the timely training and professional development opportunities we make widely available.

Accelerate Change

To drive progress, we work collaboratively with public health organizations to codesign products and services and unite public health and knowledge translation. Collaborating with our fellow NCCs, along with other national and international public health and knowledge translation organizations, allows us to maximize collective resources to take on big challenges. Through focus groups and consultations, we help public health organizations identify their EIDM needs and set priorities. Our team members share knowledge and expertise with public health and knowledge translation working groups. We also continue to explore, develop and contribute to innovations in knowledge translation and evaluation.
